# Optimal Services for the Mobile Tourist

By Vassili Loumos

### A few words about us

#### Vassili Loumos

- Professor of Computer Graphics and Multimedia
- School of Electrical & Computer Engineering
- National Technical University of Athens
- Director of Multimedia
   Technology Laboratory

# The challenge

Best match between
what a tourist wants
and
what is available
at a specific place and time

#### An example scenario

John, a jazz fan, is on holiday in the island of Santorini.

#### An example scenario

A live Jazz music event will take place this evening in a café, in the town of Oia.

John receives a notification about the event.

# Inform, Attract and Serve the Tourist

- John has the *Mobile Tourist Application* installed on his smartphone and he has "jazz music" high on his preferences list.
- The town of Oia, that he is currently visiting, has a jazz café, which tonight will be holding a live jazz music event.
- The owner/manager of the café has registered the event in the *Mobile Tourist Application* and John receives a notification about the event.

# Our approach

The Mobile Tourist Application is a Recommender System composed of three separated and interconnected modules

- 1. Available events
- 2. Tourists' interests
- 3. Matching mechanism

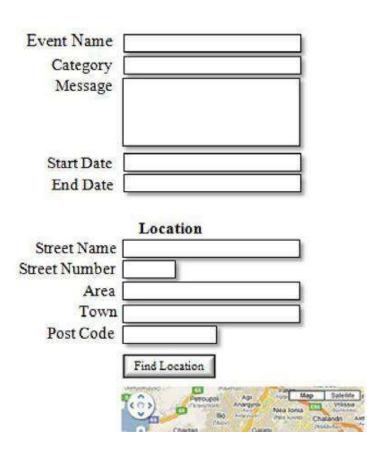

## Event categories and sub-categories

ART (A)	SPORTS (B)	SCIENCE (C)	RECREATION (D)	COMPUTERS (E)
Architecture (a1)	News (b1)	Technology (c1)	Tourism (d1)	Internet (e1)

# Matching mechanism

 Neural Networks for selection, classification and best match between tourists and events

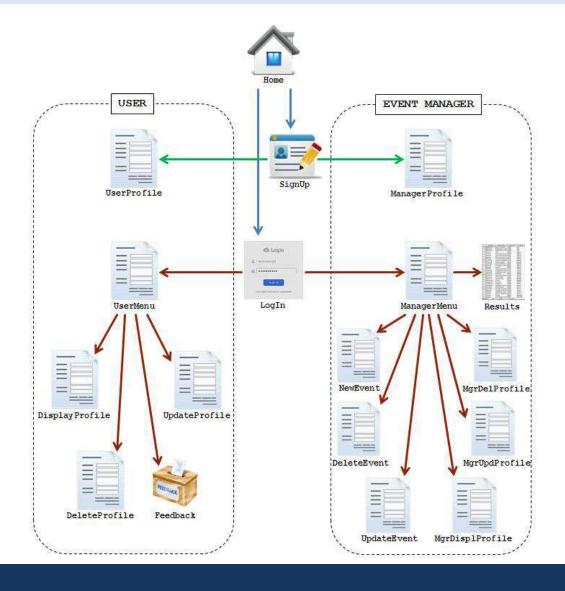

Google maps for location and navigation

# The ranking service

# System Architecture

WEB site

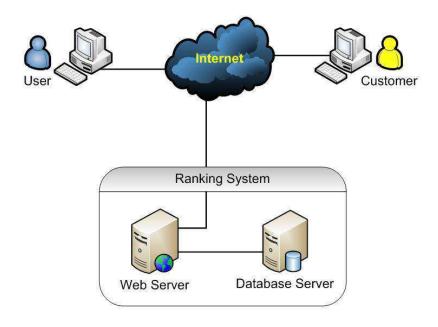

# System Architecture

Windows Service

Database Server

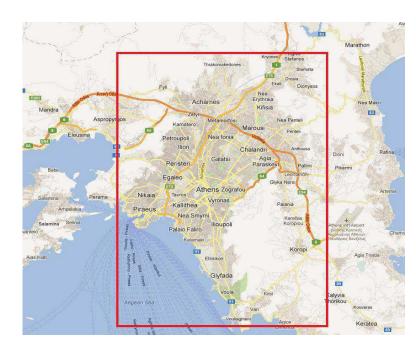

# System Analysis

#### Geolocation

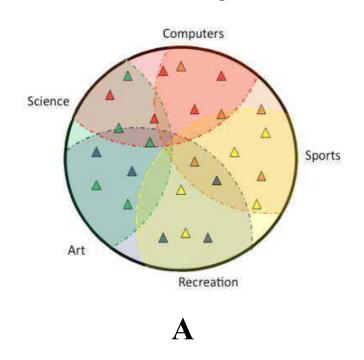

- Longitude: from 23,60 to 23,90 degrees east
- Latitude: from 37,80 to 38,10 degrees north
- Length of each square in the grid 500 meters

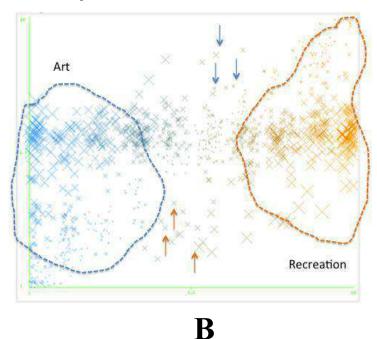

# System Analysis

#### Classification Algorithm – Proximity Estimation

Probabilistic Neural Network

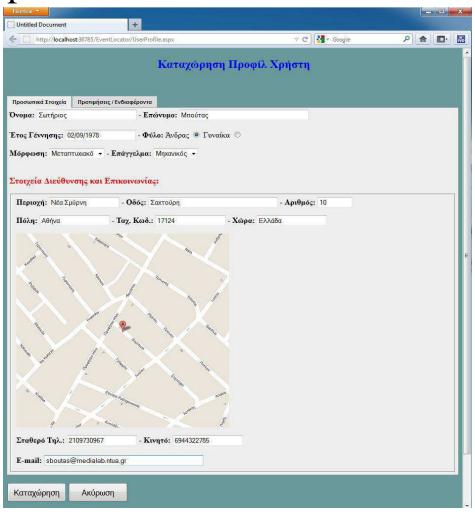

#### **User Interface**

#### Service

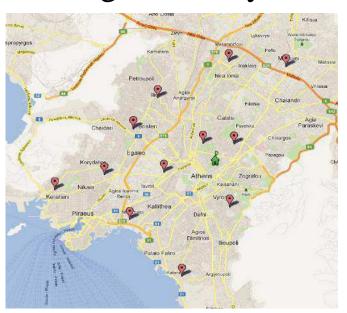

#### Service

# **System Evaluation**

#### Ranking efficiency and evaluation

Event Characteristics

- Event type: Concert

- Category: Art (A)

- Sub-Category : Music (a4)

- Location: Lycabetus Hill, Athens, 10677

В

# The next step in Tourist's Profiles

By analyzing Big Data from Social Media

with advanced Natural Language Processing Techniques

we expect, in the near future, to achieve High Accuracy in Users' profile design

Thank you for your attention
