

**APPROACHING THE GEOMETRIC GEODETIC TRIANGULATION
OF THE AMORGOS ISLAND**

**MR. DIMITRIS PERDETZOGLU - DR. PHARMACIST – RESEARCHER IN
THE UNIVERSITY OF COPENHAGEN**

The research of existing bibliography, as well as careful field research, show that the spots where ancient pre-Christian and meta-Christian temples were build, weren't picked up at random. On the contrary it's obvious that our ancestors of prehistoric times knew about the existence of energy fields / drafts and their consequences / effects on human temperament.

For the first time in Amorgos explicitly shown that besides ancient Greek temples, Orthodox Christian temples follow the triangular configuration and energy lines. As far as we know, at least about Greece, probably this is the first time that the phenomenon of triangularity of Orthodox temples is observed and registered.

Thus, up to date, on Amorgos b/n temples (mainly Orthodox Christian) in vertical dimensional projection on map (by computer) have been discovered and measured 19 triangles and 35 right angle triangles with universal constants incorporated in the mathematical relations of their sides. As well as a multitude of triangular configurations in Greece, as well as in the larger semi – Mediterranean region. Hereby are shown maps with the relevant explanations.

A more extensive research on the subject of triangular configurations was carried out to the aim, as much as possible, persuasive motivation of the value and significance of triangular configuration in the ancient world to be given.
